Ideation Phase

Brainstorm& IdeaPrioritization Template

Date	13 October 2026
Team ID	6ab4a4d8a238dc999eb4a480
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Incidentrecords oftenrequireconsistentand accuratedataentry.Relyingsolelyonuserawareness and manual checks can lead to incomplete, inconsistent, or incorrect data being submitted. The selected problem is to enforce conditional field behavior and validation directly at the user interface level.

Step-2: Brainstorm, Idea Listing and Grouping

Idea / Configuration	Description
UI Policy – High Impact Control	Apply additional controls when an Incident has a high impact; set Assignment group mandatory and reverse the changes when the condition is not met.
UI Policy Action – Urgency	Make the Urgency field read-only when Impact = High.
onChange Client Script	When Impact is High, set Urgency to High and display an information message.
onSubmit Client Script	Prevent saving a High impact Incident when Assigned To is empty and display a warning.
onCellEdit Client Script	Prevent changes to the State field through list editing and ask the user to open the Incident.
Testing the Configuration	Test mandatory enforcement, successful save, reverse condition, list edit blocking, and form-based update.

Step-3: Idea Prioritization

Priority	Idea	Reason / Intended behavior
1	1. Enforce required data before save	Use the onSubmit Client Script to prevent saving when Impact is High and Assigned To is empty.
2	2. Apply conditional field behavior	Use the High Impact Control UI Policy and UI Policy Action to control mandatory and read-only behavior.
3	3. Automate urgency	Use the onChange Client Script to set Urgency to High for a High impact Incident.
4	4. Restrict list editing of State	Use the onCellEdit Client Script to block direct State changes in the list.
5	5. Verify all configured behavior	Test each rule and confirm that the configured behavior works as expected.
