Project Design Phase-II

Data Flow Diagram & User Stories

Date	13 october 2026
Team ID	6ab4a4d8a238dc999eb4a480
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

ADataFlow Diagram(DFD)is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD for Implement Client Script & UI Policy (Incident):

User Opens or edits an Incident	→	Incident Form Enters details and changes Impact / State	→	UI Policy & UI Policy Actions Mandatory and read-only field behavior	→	Client Scripts onChange, onSubmit, onCellEdit	→	Incident Record Saved if validation passes; otherwise blocked

Flow: User → Incident Form → UI Policy / UI Policy Actions and Client Scripts → Incident record saved or submission blocked.

User Stories

Usethebelowtemplate to list all the user stories for the product.

User Type	Functional Requirement (Epic) Incident UI Policy	User Story Number USN-1	User Story / Task	Acceptance criteria	Priority	Release
Incident user			As an Incident user, I can have the High Impact Control UI Policy applied when Impact is High.	The policy applies to the Incident table when Impact is 1 – High; Assignment group is mandatory and Reverse if false is true.	High	Sprint-1
Incident user	Urgency Field Control	USN-2	As an Incident user, I can have the Urgency field controlled when Impact is High.	Urgency becomes read-only when Impact is High; Visible remains unchanged.	High	Sprint-1
Incident user	Automatic Urgency Update	USN-3	As an Incident user, I can have Urgency set automatically when I change Impact to High.	The onChange Client Script sets urgency to '1' and displays the information message.	High	Sprint-1
Incident user	Incident Save Validation	USN-4	As an Incident user, I cannot submit a High-impact Incident when Assigned To is empty.	The onSubmit Client Script shows the error message and returns false when Impact is High and Assigned To is empty.	High	Sprint-1
Incident user	Prevent State List Editing	USN-5	As an Incident user, direct State changes through list editing are blocked.	An alert appears and callback(false) blocks the list edit; State changes through the form can be tested separately.	High	Sprint-1
Administrator	Configuration Testing	USN-6	As an administrator, I can test the configured Incident UI Policy and Client Scripts.	Tests cover mandatory enforcement, successful save, reverse condition, list edit blocking, and form-based State update.	High	Sprint-1

Note: User stories are based on the supplied Incident project document. Priority and release labels are formatted to match the template; the original project document does not specify them.
