Functional & Performance Testing Template

Model Performance Test

Date	13 October 2026	**Team ID**	6ab4a4d8a238dc999eb4a480
Project Name	Implement Client Script & UI Policy (Incident)	**Maximum Marks**	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Test Mandatory Enforcement	Set Impact to High, leave Assigned To empty, and click Submit.	The Incident should not be saved because Assigned To is required when Impact is High. An error message should appear.		
FT-02	Test Successful Save	Fill the Assigned To field and click Submit.	The Incident should be saved successfully without errors. Urgency auto-setting, read-only fields, and State restrictions should function as expected.		
FT-03	Reverse Condition Test	Open an Incident with Impact set to High. Change Impact to Medium and save.	Assigned To should no longer be mandatory. Urgency should be editable. The record should save successfully without errors.		
FT-04	Test List Edit Blocking	Go to Incident → All and try to change the State field directly in the list.	An alert should appear stating that direct State changes are not allowed. The State value should remain unchanged.		
FT-05	Test Form-Based Update	Open the Incident record, change the State field on the form, and click Update.	The State change should save successfully. Assigned To and Urgency should continue to follow the configured UI Policy and Client Script rules.		

Actual Result and Pass/Fail fields are left blank for the project team to complete.
