SERVICENOW FUNCTIONAL SPECIFICATION & PROJECT REPORT

Implement Client Script & UI Policy (Incident)

1. Introduction & Project Overview

PROJECT TITLE	PLATFORM & TABLE
Implement Client Script & UI Policy (Incident)	**ServiceNow | Incident Table (incident)**

1.1 Purpose

Incident records require consistent and accurate data entry for effective triage, routing, and resolution. Relying solely on user awareness can lead to incomplete or incorrect data, affecting reporting accuracy, SLA compliance, and service quality. This project applies conditional field behavior and client-side validation to ensure Incident records adhere strictly to business rules.

1.2 Key Features

- Make **Assignment group** mandatory when Impact is High via UI Policies.
- Make **Urgency** read-only when Impact is High.
- Automatically set **Urgency** to High using an onChange Client Script.
- Prevent saving High-impact Incidents when **Assigned To** is empty via an onSubmit Script.
- Block direct **State** field changes from list views using an onCellEdit Script.

2. Ideation & Problem Analysis

Problem Statement: Standardized UI Policies and Client Scripts are required to control field visibility, mandatory status, and save-time validation, resolving the risk of unassigned or mismanaged high-impact tickets.

Brainstorming & Solutions: Enforce mandatory assignment groups, lock urgency fields under high impact conditions, automate urgency setting, and restrict state modifications outside form views.

3. Architecture & Technical Stack

The solution operates entirely within the ServiceNow platform environment, utilizing built-in form controllers and scripting engines:

- **UI Behavior:** Managed by ServiceNow UI Policies and UI Policy Actions for conditional mandatory and read-only field states.
- **Client-Side Logic:** Implemented via `onChange`, `onSubmit`, and `onCellEdit` Client Scripts.

4. Setup & Configuration Instructions

1. Log in to the ServiceNow instance with administrative or configuration privileges.
2. Navigate to **System UI** → **UI Policies** and create the *"High Impact Control"* policy for the Incident table with condition `Impact is 1 - High`.
3. Configure UI Policy Action: set **Assignment group** to mandatory (Reverse if false = true), and set **Urgency** read-only to true.
4. Navigate to **System UI** → **Client Scripts** to create the `onChange`, `onSubmit`, and `onCellEdit` scripts.

9. User Interface & Behavior Specifications

On the Incident form, interacting with the **Impact** field dynamically alters form attributes:

- High impact triggers mandatory **Assignment group** and locks **Urgency**.
- Client scripts auto-populate urgency and intercept invalid submissions lacking an assignee.
- List editing on the **State** field is strictly intercepted and blocked with an alert.

10. Functional Testing & Verification

Test Activity	Action / Input	Expected Result
1. Mandatory Enforcement	Set Impact = High, leave Assigned To empty, submit.	Incident not saved; error message displayed.
2. Successful Save	Populate Assigned To and submit.	Saves successfully; urgency rules apply.
3. Reverse Condition	Change Impact from High to Medium.	Assigned To optional; Urgency editable.
4. List Edit Blocking	Attempt to edit State directly in list view.	Alert triggers; State remains unchanged.

Appendix: Client Script Source Code

onChange Client Script: Auto-set urgency for high impact

```
function onChange(control, oldValue, newValue, isLoading) { if (isLoading || newValue == '') { return; } if (newValue == '1') { g_form.setValue('urgency', '1'); g_form.addInfoMessage('Urgency set to High for High impact incident.'); } }
```

onSubmit & onCellEdit Scripts

```
function onSubmit() { if (g_form.getValue('impact') == '1' && g_form.getValue('assigned_to') == '') { g_form.showErrorBox('assigned_to', 'Assigned To is mandatory for High impact incidents.'); return false; } return true; } function onCellEdit(sysIDs, table, oldValues, newValue, callback) { alert('State cannot be updated using list editing. Please open the Incident.'); callback(false); }
```
